FUTURE RESIDENTS OF HILLSHAW HOUSE, RIPON, WILL BENEFIT FROM THE FEED IN TARIFF

In July of 2010 Solarwall installed several Solar Photovoltaic systems across a number of properties owned by Finings Associates.

The homes, built to be sold onto environmentally-conscious families, will not only be able to generate their own electricity but, thanks to the Feed in Tariff, will also earn money for their occupiers by selling the electricity they do not use back to the National Grid.

What is the Feed in Tariff?

The tariff is a payment to anyone who owns a renewable electricity system, for every kilowatt hour they generate. They are applicable to households, businesses and virtually any property owner.

How much is paid?

Up to 41.3p/kWh, depending on the type and size of the system used to generate renewable energy. Plus an additional 3p/kWh when you export any surplus back to the grid.

Also, you reduce costs on your electricity bill when you use your own energy.

For how long?

Tariffs are paid for 20 years, except solar systems which qualify for 25 years. Tariffs are index-linked to RPI

SOLAR PHOTOVOLTAIC INSTALLATION, MALTON, NORTH YORKSHIRE

In January 2011 Solarwall installed an 18 panel Solar Photovoltaic system on the home of Mrs. Barbara Knight in Swinton, near Malton.

The panels were installed over two roof spaces and will earn more than £1200 per year for Mrs. Knight, guaranteed for 25 years.

"The surveyor was very pleasant, polite and well mannered. He answered all my questions. We had considerable difficulty with the council but I always found the staff of Solarwall to be understanding and reasonable to deal with.

The actual installation was very simple and done in a day. The installers were polite, well mannered and quiet. They explained everything.

I could not speak more highly of Solarwall."

TRIPLE INSTALLATION - SOLAR PV, SOLAR THERMAL & AIR SOURCE HEAT PUMP - HULL

An energy conscious customer in Hull not only wanted to generate their own electricity and benefit from the Feed in Tariff, but also wanted to heat their water and home. Solarwall immediately set to installing Solar Photovoltaic panels for electricity, a Solar Thermal System for water heating and an Air Source Heat Pump to help make their house cosier.

Air Source Heat Pump

"I chose Solarwall as it is a local company which had been in business for over 30 years. Everyone I dealt with appeared to be helpful and knowledgeable.

I also wanted to deal with a company which could plan, execute and install in one package and so could be held responsible for all aspects of the work, rather than one which used subcontractors.

I am pleased with the installation and subsequent service provided."
