

# CAVITY WALL INSULATION

## WHAT GUARANTEE DO WE GET

Domestic installations can apply for a CIGA (cavity insulation guarantee agency) guarantee which is an independent guarantee for 25 years. Commercial installations may also qualify dependant on the size of the property. The BBA (British Board of Agreement) say the insulation should last the life of the building.

## WHAT ARE THE BENEFITS?

- Savings up to 25%\*
- Your home will be warmer in winter, cooler in summer, and more energy efficient
- A cost effective option which can pay for itself in less than 3 years, and an effective long-term investment providing savings now and for many years to come.
- Easy to install in less than a day and all work is done from the outside of the property

## WHY SHOULD I BUY CAVITY WALL INSULATION NOW?

Cavity wall insulation is probably the single most cost effective method of reducing your fuel bills, providing a sound investment with possibly the best return for your money in these difficult times.

The sooner you install cavity wall insulation, the sooner you will start saving money.

## WHAT U-VALUES CAN BE ACHIEVED?

Cavity Width	Brick & Brick	Brick & Block	Brick & Aerated Block
50mm	0.56	0.52	0.47
65mm	0.46	0.44	0.40
75mm	0.41	0.39	0.36
100mm	0.32	0.31	0.29

# CAVITY WALL INSULATION

**“YOUR HOME IS LOSING 35% OF HEAT\* FROM YOUR UNINSULATED WALLS”**

## IS YOUR PROPERTY SUITABLE?

If your property was built between the 1940's and the 1980's and has a cavity width of more than 50mm and the masonry and brickwork are in a sound condition then it should be suitable for cavity wall insulation. Trained assessors will carry out a survey and scope your walls to check the condition and the cavity width.

## WHY DO YOU NEED IT?

Your home is losing 35% of heat\* from your uninsulated walls

## HOW IS IT DONE?

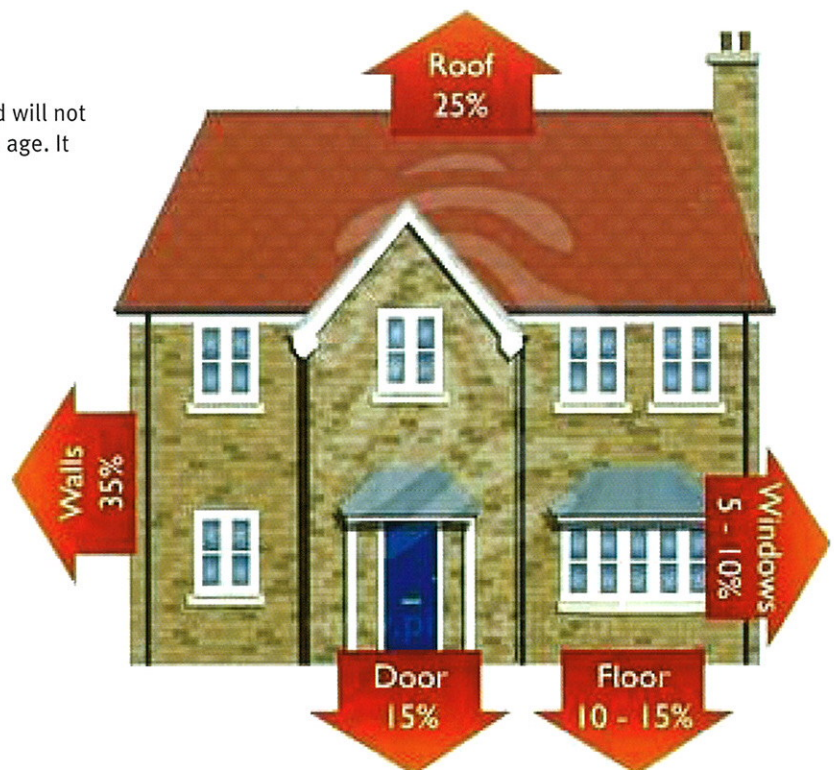

Small holes are drilled through the mortar joints and the material is pumped in. The whole process can be completed within a few hours, without any damage or mess to the property or garden.

## WHAT IS THE MATERIAL?

White wool performs in all weather exposure zones and will not settle, crack, burn or transmit water or deteriorate with age. It also allows the walls to breathe

## WHAT ABOUT VENTILATORS THAT ARE IN THE EXTERNAL WALL?

Ventilators that supply combustion air to fuel burning appliances must be safeguarded and checked to ensure they are the correct specification and under floor ventilators must be clear of insulation material. The technicians check all this before they start the job.
